Computer Systems Forensic Analysis AFSC

1 - Overview of Cybercrime

Artur Varanda
School Year 2021-2022

Cyberspace is the human sensation of space, offered by current communication technologies, supported by new business models, social networks, cloud computing, blogs, online stores,...

Information Security Principles

The principles of information security are based on the CIA concept:

- **Confidentiality:** ensures restriction access to information;
- **Integrity:** ensures consistency and inalterability of data;
- **Availability:** ensures data availability;

Also:

- **Non Repudiation:** ensures that the sender of information is provided with proof of delivery and the recipient is provided with proof of the sender's identity, so neither can later deny having processed the information.

AAA Services Concept:

- **Authentication:** identity verification Ex: login and password;
- **Authorization:** user privileges;
- **Accounting:** generation of logs on user actions in the system.

Cybercrime VS Computer Crime

- Cybercrime is any illicit act practiced in cyberspace, whether it is a computer crime or any other committed by computer means.

Cybercrime VS Computer Crime

- Computer Crime – an action that violates one of the CIA or AAA principles

Cybercrime Slang

BBS's (Bulletin Board System)

Total or partial availability of information related to:

- Explosives
 - Credit cards
 - Description of ways to carry out crimes
 - Copyright protected software
-
- In Portugal, BBSs are neither prohibited nor regulated, except with regard to the technical means used, which must comply with what is recommended by ANACOM – Autoridade Nacional de Comunicações.
 - However, the content of BBS's and Portuguese Newsgroups cannot incite, help, facilitate or make available data or information that contravenes the law or in any way constitute a risk to personal, national or international safety.

BBS's (Cont.)

- Depending on the case, it assumes the figure of irregular practice or crime, who posts or makes available, in whole or in part, data relating to explosives, credit card numbers, description of ways of committing crimes, software protected by copyright, even if this is compressed by other programs or even if it is made available in parts or incomplete.

BlackBoxing and BlueBoxing

Blueboxing

Making unpaid phone calls using electronic devices.

Blackboxing

Interconnection of electronic components that when attached to home phones, allow all incoming calls to be received without charge to the caller.

BlackBoxing e BlueBoxing (Cont.)

Portuguese Penal Code (Decreto-Lei n.º 48/95)

Article 221

Computer and communications fraud (Burla informática e nas comunicações)

1 - Whoever, with the intention of obtaining for himself or a third party illegitimate enrichment, causes another person to lose property, interfering with the result of data processing or by incorrectly structuring a computer program, incorrect or incomplete use of data, unauthorized use of data or intervention by any other unauthorized means of processing, is punishable by imprisonment for up to 3 years or with a fine.

2 - The same penalty applies to anyone who, with the intention of obtaining an illegitimate benefit for themselves or for a third party, causes damage to another person, using programs, electronic devices or other means that, specifically or together, are intended to reduce or change or prevent, in whole or in part, the normal operation or exploitation of telecommunications services.

Carding

- Handling and obtaining personal data from the face or from magnetic strips of credit, debit or telecommunications cards.
- All forms of data manipulation or identification elements, whether on the face or contained in magnetic strips of credit, debit or telecommunications cards, as well as the implantation of data or identification elements in other technical supports, constitute a crime of forgery, punishable by up to 3 years imprisonment.
- The use of identification elements or third-party bank details is a crime of fraud, punishable by a prison sentence of up to 3 years and is aggravated if the amount in question is high or if they continue this conduct more than once.
- Abuse of the possibility conferred by the possession of a credit card, even if only for the attempted form, is punishable by up to 3 years imprisonment, which may be aggravated up to 5 years or from 2 to 8 years, if the value is high or pretty high.

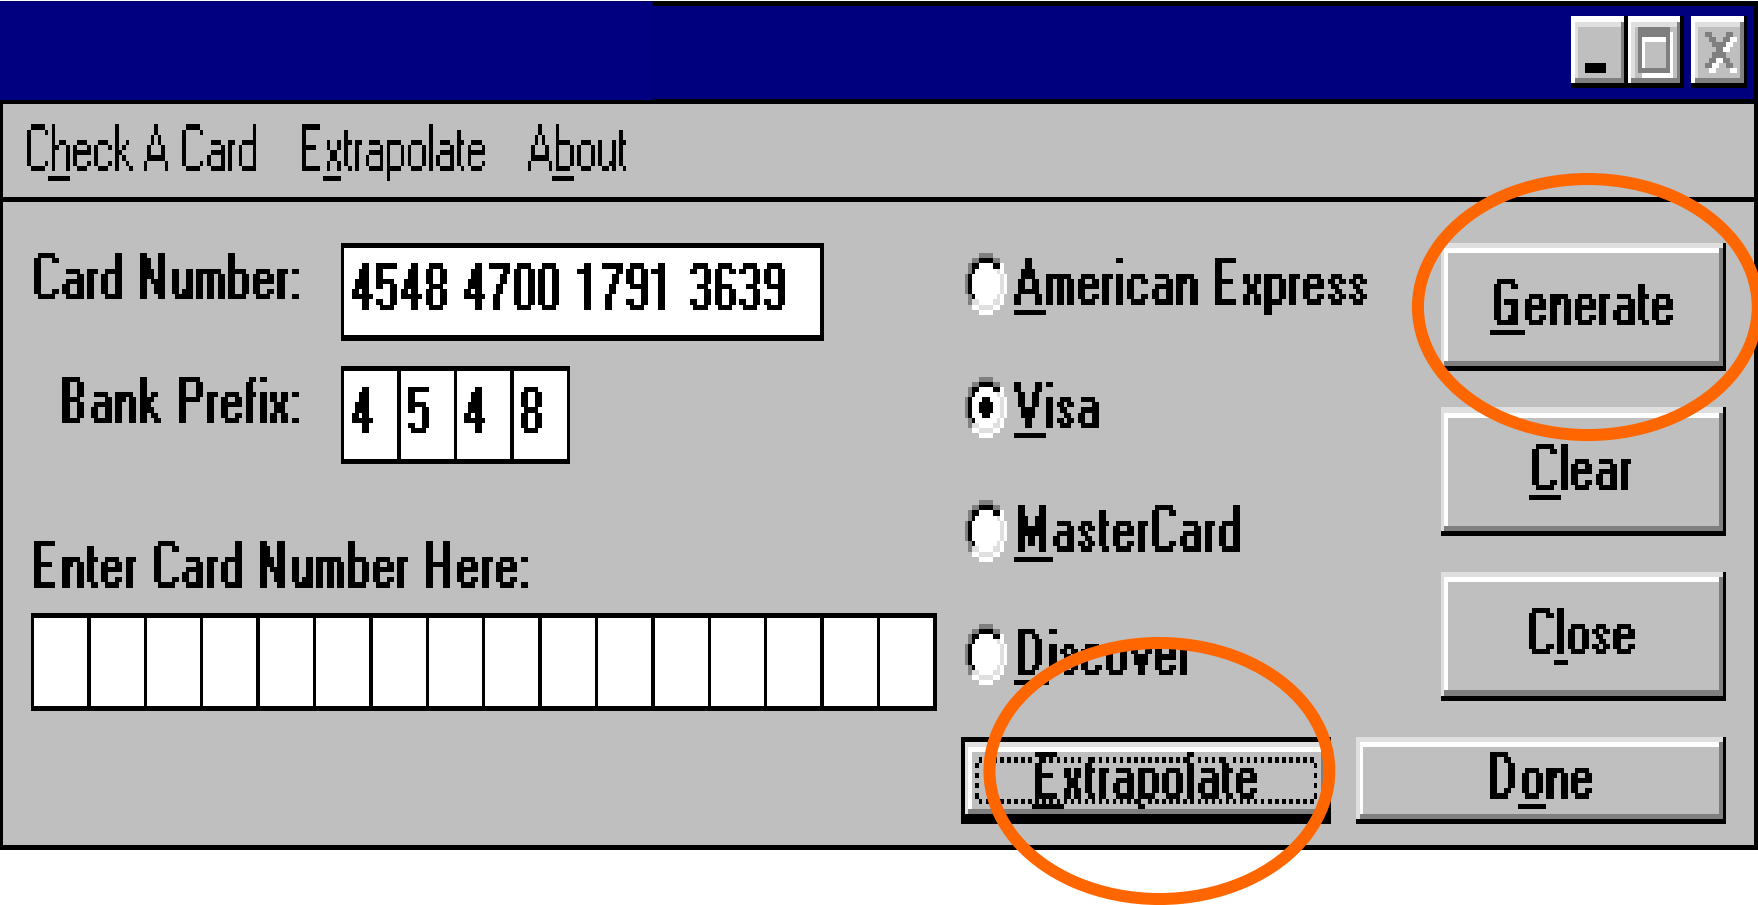

Portuguese Cybercrime Law (Lei n.º 109/2009)

Article 3

**Electronic falsification
(Falsidade informática)**

1 - Who, with the intention of causing deception in legal relations, introduce, modify, delete or delete computer data or in any other way interfere in the computer processing of data, producing non-genuine data or documents, with the intention that they are considered or used for legally relevant purposes as if they were genuine, is punishable by imprisonment of up to 5 years or a fine of 120 to 600 days.

2 - When the actions described in the previous number concern the data registered or incorporated into a payment bank card or any other device that allows access to a payment system or means, to a communication system or to a conditioned access service, the penalty is of 1 to 5 years in prison.

Cracking

- The process of recovering passwords from data that has been stored in or transmitted by a computer system in scrambled form.
- Modification of software to remove or disable features which are considered undesirable to the cracker, especially copy protection systems or software annoyances, like adware.
- A cracker uses the capabilities to his own advantage while belittling damages to third parties
- The decompilation of programs is punished by the Legal Protection of Computer Programs Law and by the Portuguese Cybercrime Law, by the article 8 on illegitimate reproduction of protected program.
- This legislation covers memory resident programs (TSRs), which allow the use of utility software and games in violation of copyright.

[Legal Protection of Computer Programs Law](#) (Decreto-Lei n.º 252/94)

Article 7

Decompilation

(Descompilação)

- 1 - The decompilation of the parts of a program necessary for the interoperability of this computer program with other programs is always lawful, even if it involves operations provided for in the previous articles, when it is the indispensable way to obtain the information necessary for such interoperability.
- 2 - The holder of the user license or another person who can lawfully use the program, or persons authorized by them, have the legitimacy to carry out the decompilation, if this information is not readily and quickly available.
- 3 - Any stipulation contrary to the provisions of the previous numbers is null and void.
- 4 - The information obtained cannot:
 - a) Be used for an act that infringes copyright on the originating program;
 - b) Damaging the normal exploitation of the originating program or causing unjustified harm to the legitimate interests of the holder of the right;
 - c) Be communicated to others when not necessary for the interoperability of the independently created program.
- 5 - The program created under the terms of subparagraph c) of the previous number cannot be substantially similar, in its expression, to the original program.

Portuguese Cybercrime Law (Lei n.º 109/2009)

Artigo 8.º

**Illegitimate reproduction of protected program
(Reprodução ilegítima de programa protegido)**

- 1 - Anyone who illegitimately reproduces, discloses or communicates to the public a computer program protected by law is punishable with up to 3 years imprisonment or a fine.
- 2 - Those who illegitimately reproduce a topography of a semiconductor product or who commercially exploit or import, for these purposes, a topography or a semiconductor product made from that topography are incurred in the same penalty.
- 3 - The attempt is punishable.

Hacking

- Intrusion on computer systems in order to understand how they work and gain more knowledge about it.
- A **hacker** is a computerized intellectual who loves to break into other people's systems to simply fill his ego.
- **Hackers** do not destroy, steal or spy on information for money, unlike **crackers**.
- **Cracking** activities (illegitimate access for the purpose of data destruction) are, under Portuguese law, a crime of illegitimate access.

Portuguese Cybercrime Law (Lei n.º 109/2009)

Article 6

Illegitimate access

(Acesso ilegítimo)

- 1 - Anyone who, without legal permission or without being authorized by the owner, by another holder of the right to the system or part of it, in any way access a computer system, is punished with up to 1 year imprisonment or with a fine up to 120 days.
- 2 - The same penalty is incurred by anyone who illegitimately produces, sells, distributes or otherwise disseminates or introduces in one or more computer systems devices, programs, an executable set of instructions, a code or other computer data intended to produce the unauthorized actions described in the previous paragraph.
- 3 - The penalty is imprisonment for up to 3 years or a fine if the access is gained through violation of security rules.
- 4 - The penalty is imprisonment from 1 to 5 years when :
 - a) Through access, the agent has become aware of commercial or industrial secret or confidential data, protected by law; or
 - b) The benefit or equity advantage obtained is of a considerably high value.
- 5 - The attempt is punishable, except in the cases provided for in paragraph 2.
- 6 - In the cases provided for in paragraphs 1, 3 and 5, the criminal procedure depends on a complaint.

[General Data Protection Regulation \(GDPR\)](#) (Lei n.º 58/2019)

Article 47

**Improper access
(Acesso indevido)**

1 - Anyone who, without proper authorization or justification, accesses personal data in any way is punishable with a prison sentence of up to 1 year or a fine of up to 120 days.

2-the penalty is doubled in its limits when dealing with personal data referred to in articles 9 and 10 of the GDPR.

3 - The penalty is also increased to double its limits when accessing:

- a) Is achieved through violation of technical safety rules; or
- b) Has provided the agent or third parties with a benefit or equity advantage.

[General Data Protection Regulation \(GDPR\)](#) (Lei n.º 58/2019)

Article 48

Data deviation

(Desvio de dados)

1 - Anyone who copies, subtracts, assigns or transfers, for a consideration or free of charge, personal data without legal provision or consent, regardless of the purpose pursued, is punishable with a prison sentence of up to 1 year or a fine of up to 120 days.

2-the penalty is doubled in its limits when dealing with personal data referred to in articles 9 and 10 of the GDPR.

3 - The penalty is also increased to double its limits when accessing:

- a) Is achieved through violation of technical safety rules; or
- b) Has provided the agent or third parties with a benefit or equity advantage.

[General Data Protection Regulation \(GDPR\)](#) (Lei n.º 58/2019)

Article 49

Data tampering or destruction

(Viciação ou destruição de dados)

1 - Anyone who, without proper authorization or justification, deletes, destroys, damages, hides, suppresses or modifies personal data, making them unusable or affecting their potential for use, is punishable with imprisonment for up to 2 years or with a fine up to 240 days.

2 - The penalty is doubled in its limits if the damage produced is particularly serious.

3 - In the situations provided for in the preceding paragraphs, if the agent acts negligently, he is punished with imprisonment:

- a) Up to 1 year or a fine of up to 120 days, in the case provided for in paragraph 1;
- b) Up to 2 years or a fine of up to 240 days, in the case provided for in paragraph 2.

[General Data Protection Regulation \(GDPR\)](#) (Lei n.º 58/2019)

Article 50

Entering false data

(Inserção de dados falsos)

1 - Anyone who enters or facilitates the entry of false personal data, with the intention of obtaining undue advantage for himself or a third party, or to cause harm, is punishable with a prison sentence of up to 2 years or a fine of up to 240 days.

2 - The penalty is doubled in its limits if the insertion referred to in the previous number results in an effective loss.

VUI's e NUI's (Virtual User Interface e Network User Identification)

- Improper use of the so-called NUIs and VUIs to access x.25 networks is a crime of illegitimate access, punishable by the Portuguese Cybercrime Law.

Nuke

- Name given to programs that prematurely terminate a TCP/IP connection by sending ICMP packets with error messages. Such packages can be directed to the server (server-side nuke) or to the client (client-side nuke).

Phreaking

- Act of circumventing public telephones, copying telephones, tapping and even breaking into telephone exchanges by individuals with high knowledge of telephone systems (***Phreakers***).

Phreaking (Cont.)

•In addition to applying the same principles relating to blueboxing activities, the use of communication networks based on the manipulation of telephone exchanges accessed without authorization for that purpose, constitutes the crime of illegitimate access under the Portuguese Cybercrime Law.

Sniffing

- Act of listening to or intercepting other people's communications.
- It is generally used to discover passwords.
- It falls under the crime of illegitimate interception.
- The trafficking of wiretapping instruments is also a crime.

Portuguese Cybercrime Law (Lei n.º 109/2009)

Article 7

Illegitimate interception

(Interceção ilegítima)

1 - Whoever, without legal permission or without being authorized by the owner, by another holder of the right to the system or part of it, and through technical means, intercept transmissions of computer data that take place within a computer system, the he intended or derived from it, is punishable with up to 3 years imprisonment or with a fine.

2 - The attempt is punishable.

3 - Incurs the same penalty provided for in paragraph 1 anyone who unlawfully produces, sells, distributes or in any other way disseminates or introduces in one or more computer systems devices, programs or other computer data intended to produce the unauthorized actions described in the same paragraph.

Portuguese Penal Code (Decreto-Lei n.º 48/95)

Article 276

**Telephone tapping instruments
(Instrumentos de escuta telefónica)**

Anyone who imports, manufactures, stores, buys, sells, assigns or acquires for any reason, transports, distributes or holds an instrument or apparatus specifically intended for the assembly of telephone tapping, or for the violation of correspondence or telecommunications, outside the legal conditions or otherwise according to the provisions of the competent authority, he is punishable with a prison sentence of up to 2 years or a fine of up to 240 days.

Spam

- It consists of sending a large number of unsolicited e-mail messages.
- E-mails to publicize products and services, requests for donations of assistance works, lucky chains, proposals to earn easy money, lying rumors, among others.
- Basically, it is the simultaneous sending of an e-mail message to several users at the same time. It generally has the following characteristics:
 - a) is not requested by the recipient;
 - b) the sender's identification is false;
 - c) a victim's email server machine is used, be it an ISP or a public or private entity.

Spam (Cont.)

- In Portugal, it is this third paragraph c) that gives the criminal classification to those who send “spam”, since those who use a third-party email server in those terms can be accused of committing the crime of illegitimate access.
- The crime of Electronic falsification may also coexist if the falsified address identification referred to in paragraph b) (sender's identification is false) belongs to a specific person.
- If the purpose of "spam" is to interfere with the normal functioning of a computer system, it may be considered a crime of computer sabotage, punishable by a five-year prison sentence or a fine.

Portuguese Cybercrime Law (Lei n.º 109/2009)

Article 5

Computer sabotage

(Sabotagem informática)

1 - Whoever, without legal permission or without being authorized by the owner, by another holder of the right to the system or part of it, hinders, prevents, interrupts or seriously disturbs the operation of a computer system, through the introduction, transmission, deterioration, damage, alteration, deletion, impediment of access or deletion of programs or other computer data or any other form of interference in a computer system, is punishable with a prison sentence of up to 5 years or a fine of up to 600 days.

2 - The same penalty is incurred by anyone who illegitimately produces, sells, distributes or in any other way disseminates or introduces into one or more computer systems devices, programs or other computer data intended to produce the unauthorized actions described in the preceding paragraph.

Phishing

- It is an attempt to trick Internet service users into providing their confidential information, such as the username and password to access Home Banking.
- Often, these attempts use apparently legitimate emails or instant messages, combined with fake websites, to make fraudulent requests for information (ie, they will "fish" data).
- Phishing is a type of online fraud and phishers are nothing less than tech savvy crooks. In a typical phishing scam, phishers send emails that appear to come from a legitimate company in an attempt to trick users into providing their personal information, which will be used for "identity theft".
- Phishers use a variety of sophisticated devices to get the information they want, including pop-up windows, URL masks that simulate real web addresses, and keyboard action readers (keyLoggers, AxisLoggers, ScreenLoggers) that capture account names and passwords.

Social engineering: Electronic falsification

Phishing email dissemination; Hosting of Phishing sites; Aggregation of information collected in Phishing scams.

Intrusion: Illegitimate access

Exploits; SQL Injections; XSS; File Inclusion; Illegal login (Brute-force; Password cracking; Dictionary attacks); Bypass control system. Theft of access credentials.

Pharming

- It is an attempt to deceive Internet users by misappropriating or misusing a website's domain name or URL and redirecting its visitors to a fake website where fraudulent requests for information are made.
- Phishing and pharming activities are punishable in Portugal, depending on the applicable legal framework, such as Illegitimate access or computer sabotage crimes under the Portuguese Cybercrime Law and also as computer and communications fraud under the Portuguese Penal Code.

Internet Grooming

- Internet grooming is the English expression used to generically define the process used by sexual predators on the Internet, ranging from initial contact to sexual exploitation of children and young people.
- It is a complex, carefully individualized process, patiently developed through assiduous and regular contacts developed over time and which may involve flattery, sympathy, offering gifts, money or supposed modelling work, but also blackmail and intimidation.
- It is, in most situations, the preparatory act for another illegal activity: **Child Sexual Abuse (Pedophilia)**

Portuguese Penal Code (Decreto-Lei n.º 48/95)

Article 171

Exhibitionist acts

(Atos exibicionistas)

Anyone who harasses another person, performing exhibitionist acts in front of him or her, is punishable with up to 1 year imprisonment or a fine of up to 120 days.

Article 172

Child sexual abuse

(Abuso sexual de crianças)

3 - Who:

- a) Carrying out an exhibitionist act in front of children under 14 years of age; or
- b) Acting on a minor under the age of 14, through obscene conversation or writing, pornographic performance or object, or using it in pornographic photography, film or recording;

is punishable with up to 3 years imprisonment.

4 - Anyone who performs the acts described in the preceding paragraph with a profit motive is punishable by imprisonment from 6 months to 5 years.

Portuguese Penal Code (Decreto-Lei n.º 48/95)

Article 173

Sexual abuse of adolescents and dependents

(Abuso sexual de adolescentes e dependentes)

2 - Anyone who performs an act described in the paragraphs of paragraph 3 of article 172, in relation to a minor included in the paragraphs of the previous paragraph of this article and under the conditions described therein (*), shall be punished with up to 1 year imprisonment.

3 - Anyone who practices or takes to practice the acts described in the previous number with profit intention is punishable with up to 3 years imprisonment.

(*) A minor between 14 and 16 years of age who has been entrusted with education or assistance; or a minor between 16 and 18 years of age who has been entrusted with education or assistance, with abuse of the function he or she holds.

Portuguese Penal Code (Decreto-Lei n.º 48/95)

Article 176

Children's pimping

(Lenocínio de menor)

1 - Anyone who encourages, favors or facilitates the exercise of prostitution of minors between 14 and 16 years of age, or the practice of relevant sexual acts, is punishable with imprisonment from 6 months to 5 years.

2 - If the agent uses violence, serious threat, ruse or fraudulent maneuver, acts professionally or with profit intention, or takes advantage of the victim's psychological incapacity, or if the victim is under 14 years of age, he is punished with a prison sentence of 2 to 10 years.

Sextortion

- Sextortion is a form of blackmail where someone threatens to share intimate images online unless the victim give in to their demands.
- These demands are typically for money, more intimate images or sexual favors.
- Blackmailers often target people through dating apps, social media, webcams or adult pornography sites.

Portuguese Penal Code (Decreto-Lei n.º 48/95)

Article 222	Article 153	Article 154	Article 155
Extortion Threat	Duress	Severe duress	
(Extorsão)	(Ameaça)	(Coação)	(Coação grave)

Portuguese Penal Code (Decreto-Lei n.º 48/95)

Article 222

Extortion

1 - Whoever, with the intention of obtaining for himself or for a third-party illegitimate enrichment, constrains another person, through violence or threat with important harm, to a patrimonial disposition that entails, for him or for others, damage is punishable with the penalty of imprisonment for up to 5 years.

2 - If the threat consists in the disclosure, through the media, of facts that could seriously damage the reputation of the victim or another person, the agent is punished with imprisonment from 6 months to 5 years.

Datajacking / Ransomware

- Extortion of companies through the action of a hacker who after illegally access the system of that company proceeds to the encryption of the data stored there.
- The company is then contacted, and a ransom is required so that they can regain access to the system and information.
- It is punished in Portugal, depending on the applicable legal framework, as a crime of illegitimate access or computer sabotage under the Portuguese Cybercrime Law and as a **document extortion** under de Portuguese Penal Code.

Portuguese Penal Code (Decreto-Lei n.º 48/95)

Article 223

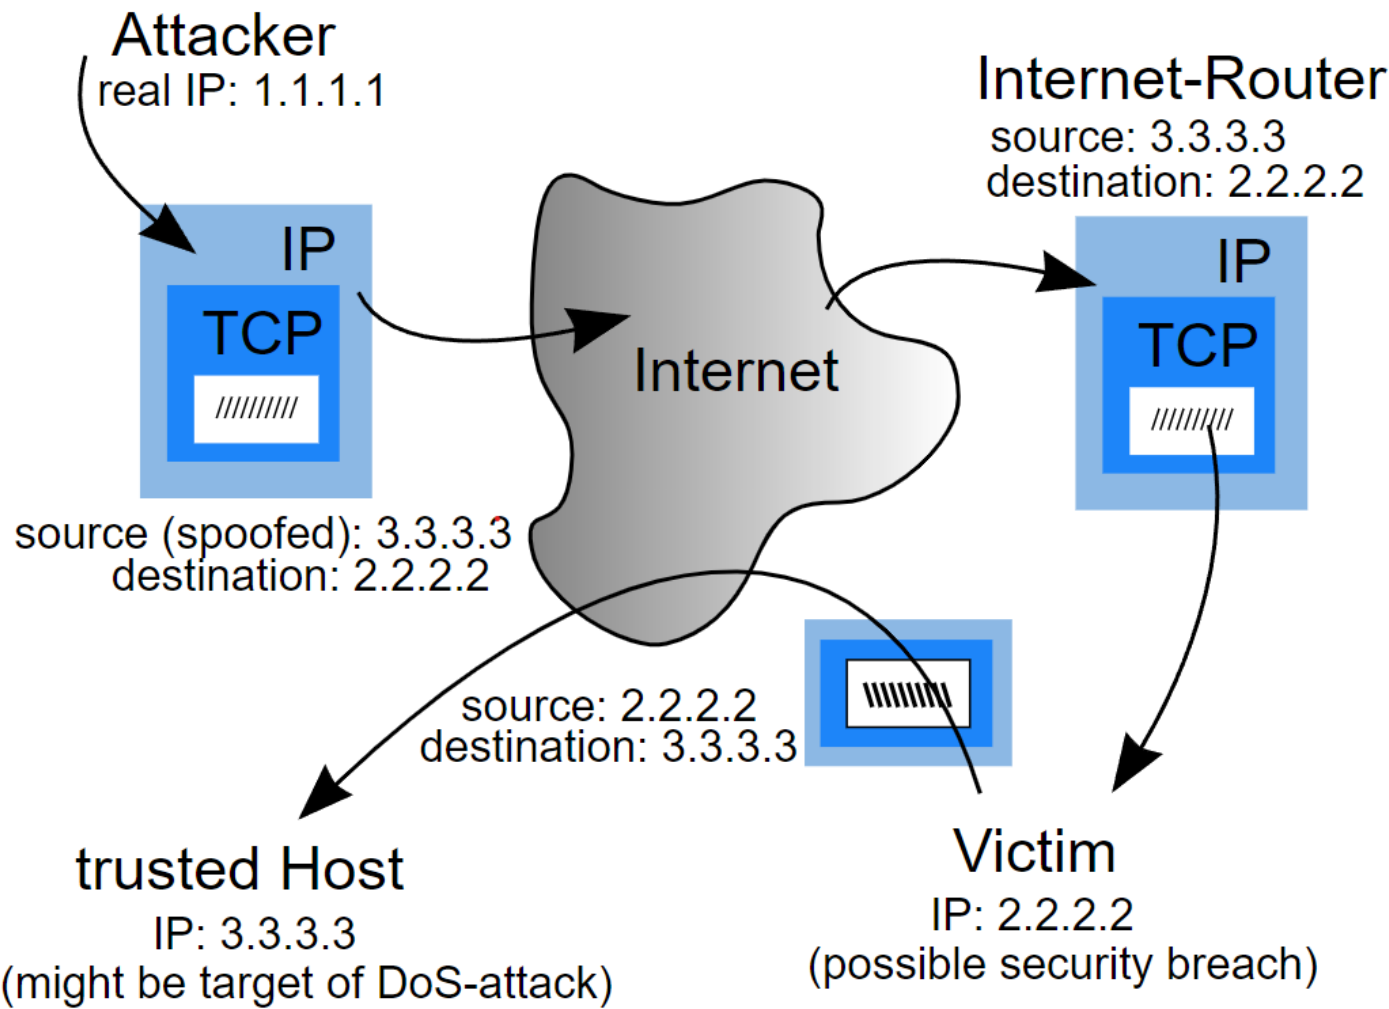

Document extortion

(Extorsão de documento)

Anyone who obtains, as a guarantee of debt and abusing another person's situation of need, a document that could give rise to criminal proceedings, is punishable with a prison sentence of up to 2 years or a fine of up to 240 days.

IP spoofing

- It is a computer systems subversion technique that consists of masking (spoof) IP packets using spoofed sender addresses.
- In the IP protocol, the forwarding of packets is based on a very simple premise: the packet must go to the recipient (destination-address) and there is no verification of the sender — there is no validation of the IP address nor its relationship with the previous router (who forwarded the package). Thus, it becomes trivial to spoof the source address through simple manipulation of the IP header.
- In Portugal, it can be penalized as a crime of Electronic falsification under the Portuguese Cybercrime Law or as a computer and communications fraud under the Portuguese Penal Code.

SYN flood (Denial of Service – DoS or DDoS)

- SYN attack is a form of denial-of-service attack on computer systems, in which the attacker sends a sequence of SYN (synchronization) requests to a target system.
- When a client tries to initiate a TCP connection with a server, the client and server exchange a series of messages, which are typically:
 1. The client requests a connection by sending a SYN (synchronize) to the server.
 2. The server confirms this request by sending a SYN-ACK back to the client.
 3. The client in turn responds with an ACK, and the connection is established.
- This is called the Three-Way Handshake.

SYN flood (Cont.)

Normal Connection (TCP 3-Way Handshake)

SYN Flood Attack

SYN flood (Cont.)

- A malicious client may not send this last ACK message.
- The server will wait for this for a while, as simple network congestion can be the cause of the missing ACK.
- This so-called semi-open connection can take up resources on the server or cause losses for companies using licensed software per connection.
- It might be possible to occupy all the resources of the machine, with several SYN packages.
- Once all resources are occupied, no new connections (legitimate or otherwise) can be made, resulting in a denial of service.
- It is penalized as a crime of computer sabotage under the Portuguese Cybercrime Law.

Cyberterrorism

- Cyberterrorism is the use of the Internet to conduct violent acts that result in, or threaten, the loss of life or significant bodily harm, in order to achieve political or ideological gains through threat or intimidation.
- The 2007 cyberattacks on Estonia were a series of cyberattacks which began on 27 April 2007 and targeted websites of Estonian organizations, including Estonian parliament, banks, ministries, newspapers and broadcasters. Most of the attacks that had any influence on the general public were distributed denial of service type attacks ranging from single individuals using various methods like ping floods to expensive rentals of botnets usually used for spam distribution.

- Stuxnet is a malicious computer worm first uncovered in 2010 and thought to have been in development since at least 2005. Stuxnet targets supervisory control and data acquisition (SCADA) systems and is believed to be responsible for causing substantial damage to the nuclear program of Iran. Although neither country has openly admitted responsibility, the worm is widely understood to be a cyberweapon built jointly by the United States and Israel in a collaborative effort known as Operation Olympic Games
- In late November 2014, Sony Pictures Entertainment was hacked by a group calling itself the Guardians of Peace. The hackers, who are widely believed to be working in at least some capacity with North Korea, stole huge amounts of information off of Sony's network.

Malware : Crime of computer sabotage under the Portuguese Cybercrime Law.

Infection; Dissemination; Web hosting or Server; Replication.

Non-availability and sabotage: Crime of computer sabotage under the Portuguese Cybercrime Law.

DoS; Disruption of processing and response capacity; Package Flood; Exploit;

Illicit information collection: Crime of illegitimate interception under the Portuguese Cybercrime Law.

Scan; Probe to system; Network scan; DNS zone transfer; Sniffing; Wiretapping

Smurf Attack

- Like the SYN flood attack, although it involves a forged ICMP (Ping Service Protocol) packet sent to a broadcast address, targeted to most operating systems and routers.
 - The Smurf attack is a category of network-level attacks perpetrated against hosts with the aim of denying services.
 - The attacker sends large amounts of ICMP traffic echo requests (ping) to a network broadcast IP using a source address (spoofed IP) of the victim.
 - In a multi-access broadcast network, it can cause a few hundred computers on the network to respond to the request for each packet, which causes the computers on the network to bombard the victim with a response to the forged request.
- The Fraggle attack is a variation of the Smurf attack that sends large amounts of UDP packets to ports 7 (Echo) and 19 (Chargen).
 - Currently, the machines most affected by this type of attacks are IRC servers and their suppliers. This type of attack is penalized in Portugal just like SYN flood attacks.

Cybersquatting

- Malicious practice which consists of registering domains relating to large companies or famous people (domain name) with the intention of taking advantage of the popularity of the person or the company's trademark, also known as domain trafficking.
- Cybersquatters often register these domains before the target company, thus forcing the target company to buy the domain from them at a higher price.
- Cybersquatting comes from the term “squatting”, which describes the act of occupying a space or building, abandoned or uninhabited, without permission from its legal owners.
- In some cases, the domain name is used to post derogatory comments about the target company. The legitimate company or person has no other option than to buy the domain name at ridiculously high prices.
- This practice can be penalized as extortion in the Portuguese Penal Code.

Website defacement

- Website defacement is an attack on a website that changes the visual appearance of a website or a web page.
- These are typically the work of defacers, who break into a web server and replace the hosted website with one of their own.
- It is penalized as a crime of damage relating to programs or other computer data under the Portuguese Cybercrime Law.

Portuguese Cybercrime Law (Lei n.º 109/2009)

Article 4

Damage related to programs or other computer data

(Dano relativo a programas ou outros dados informáticos)

1 - Whoever, without legal permission or without being authorized by the owner, by another holder of the right to the system or part of it, deletes, alters, destroys, in whole or in part, damages, suppresses or renders unusable or inaccessible programs or other computer data from others or in any way affecting their ability to use, is punishable with up to 3 years imprisonment or a fine.

2 - The attempt is punishable.

Warez

- Term derived from the English language, second half of the word software in the plural, under an l33t (elitist) pronunciation: wares /'wɛərz/.
- It is Software that is illegally distributed over the Internet. The "Z" is purposeful, serving to indicate something that is illegal. It can also be used in other terms such as Gamez (pirated games), Romz (video games for PC through emulators, but also illegal), i.e., the term refers to the illegal trade (**piracy**) of copyrighted products used in general in the within organized groups, making use of *peer-to-peer* networks, sharing files among friends or among large groups of people with similar interests.
- Penalized in Portugal as the crime of usurpation under the Portuguese Code of Copyright and Related Rights and as a crime of illegitimate reproduction of a protected program, under the the Portuguese Cybercrime Law.
- Copying and distributing to third party computer programs protected by law - copyright - are prohibited and punishable by law up to three years in prison. Attempted copying or distribution is also punishable.
- This law covers the total or partial distribution of computer programs, even if compressed by other programs, in newsgroups, IRC's, www, ftp, etc.

Portuguese Code of Copyright and Related Rights (Decreto-Lei n.º 63/85)

Article 195

Usurpation

1 - Any person who, without authorization from the author or the artist, the producer of phonogram and videogram or the broadcasting organization, uses a work or service in any of the ways provided for in this Code, commits the crime of usurpation.

2 - Also commits the crime of usurpation:

- a) Anyone who improperly discloses or publishes a work not yet disclosed or published by its author or not intended for dissemination or publication, even if it is presented as belonging to the respective author, whether or not intending to obtain any economic advantage;
- b) Whoever collects or compiles published or unpublished works without the author's authorization;
- c) Who, being authorized to use a work, artist, phonogram, videogram or broadcast broadcast, exceeds the limits of the authorization granted, except in the cases expressly provided for in this Code.

3 - Will be punished with the penalties provided for in article 197, the author who, having transmitted, in whole or in part, the respective rights or having authorized the use of his work in any of the ways provided for in this Code, to use it directly or indirectly with offense of the rights attributed to others.

Digital Evidence

Digital evidence, like any other evidence, must be:

- **Admissible**
- **Authentic**
- **Precise**
- **Complete**

Digital Evidence - Requirements

- legally admissible
 - how it is obtained
- technically irrefutable
 - source
 - integrity
 - certification (digital signature)
 - dual control

Adapted from BLAKESLEEL, Hyechin - USE OF
COMPUTER FORENSICS TECHNOLOGIES
IN CRIME INVESTIGATION, 2009; KSANDER, 2006;

The process of a forensic analysis is divided into four stages:

1. Identify the source of the digital evidence;
2. Preserving the evidence (involves the duplication of evidence according to technical-legal processes);
3. Analysis and investigation of evidence;
4. Presentation of reports and documentation of results.
